

Analog Field Testing Opportunities in Hawaii - a review of the 2012 Summer test and future prospects  
John Hamilton, PISCES and UH-Hilo.

This presentation will present a summary of the recent joint NASA/CSA ISRU Analog Field Test conducted this past summer on the slopes of Mauna Kea.

Two distinct operations areas (9,000 and 11,000 feet) were utilized, with remote command and control from a third location.

Potential opportunities for further analog uses through out the Big Island for governmental and commercial (e.g. GLXP) space ground testing will be discussed.

John Hamilton

Deputy Director

Pacific International Space Center

for Exploration Systems (PISCES)
